this volume analyzes the impediments that local conditions pose to successful outcomes of nation building interventions in conflict affected areas previous rand studies of nation building focused on external interveners activities this volume shifts the focus to internal circumstances first identifying the conditions that gave rise to conflicts or threatened to perpetuate them and then determining how external and local actors were able to modify or work around them to promote enduring peace it examines in depth six varied societies cambodia el salvador bosnia and herzegovina east timor sierra leone and the democratic republic of the congo it then analyzes a larger set of 20 major post cold war nation building interventions the authors assess the risk of renewed conflict at the onset of the interventions and subsequent progress along five dimensions security democratization government effectiveness economic growth and human development they find that transformation of many of the specific conditions that gave rise to or fueled conflict often is not feasible in the time frame of nation building operations but that such transformation has not proven essential to achieving the primary goal of nation building establishing peace most interventions in the past 25 years have led to enduring peace as well as some degree of improvement in the other dimensions assessed the findings suggest the importance of setting realistic expectations neither expecting nation building operations to quickly lift countries out of poverty and create liberal democracies nor being swayed by a negative stereotype of nation building that does not recognize its signal achievements in the great majority of cases page 4 of cover

The ESC textbook of heart failure is the latest addition to the European Society of Cardiology ESC Publications portfolio and is fully supported by the European Heart Failure Association. The textbook brings together internationally renowned experts in the field of heart failure to present an up-to-date understanding of all aspects of this chronic condition that worsens with time. It is estimated that the worldwide population of patients suffering from heart failure is approximately 26 million. This clinically oriented work reflects contemporary European guidelines from the ESC and the European Heart Failure Association and summarizes the latest evidence from clinical trials. Made up of eighteen different sections, the textbook covers the epidemiology, etiology, prevention, pathophysiology, and clinical phenotypes of heart failure. The assessment and management of chronic, acute, and advanced heart failure are all discussed in detail, as well as chapters dedicated to self-care and patient education. The multidisciplinary approach to heart failure management and clinical trial design and interpretation, the future direction of the field, is discussed throughout. With separate chapters on digital health, big data, and telemedicine, remote monitoring in heart failure is also included. A must-read for cardiovascular healthcare specialists in Europe and across the world, it should also appeal to those in training: general physicians and those caring for the elderly, cardiothoracic surgeons, primary care doctors, and specialist nurses too.

This book comes out at a very opportune time when the sector is struggling with sanitation marketing that is considered an organic next step for rural communities that have been declared open defecation free. Besides this publication, it comes in to address the gaps that face the peri-urban spaces that are facing population explosion and require innovative ways of dealing with mostly non-sewered sanitation services. This guide manual was developed as part of a training package to support business development skills training for local sanitation entrepreneurs in Kenya. Financial and technical support was provided by the United States Agency for International Development (USAID) under the Kenya Integrated Water and Sanitation Kiwash Project. Kiwash was a five-year 2015-2020 project implemented by the Development Alternatives Incorporation (DAI) across nine counties. One of the key goals of Kiwash was to help trigger and activate demand for low-cost, affordable

sanitation technologies in rural and low income communities the overall objective of this manual is to equip sanitation specialists and public resource persons with the basic concepts and tools to facilitate entrepreneurship and financial literacy training for start up sanitation entrepreneurs in rural communities specifically this manual is designed to help participants 1 learn the basic concepts of entrepreneurship and characteristics of successful entrepreneurs 2 learn and practice essential marketing techniques for sanitation products and services 3 develop money management competencies necessary to succeed as a small scale entrepreneur 4 build necessary leadership and management skills to grow successful sanitation enterprises overall the guide manual is useful in guiding implementation of sanitation marketing projects and provides concise content for nurturing and building the capacity of local sanitation enterprises entrepreneurs improved business performance by these businesses means timely response to demand from households this book is a toolkit which incorporates a training guide manual as well as a workbook for entrepreneurs

the anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated however the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens this has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment this book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards the resource recovery angle is particularly interesting as this can arguably help achieve the circular economy it is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques the succeeding discussion is intended to lead on to identification of opportunities for further research and development this book can be used as a standard reference book and textbook in universities for master and doctoral students the academic community relevant to the subject namely faculty researchers scientists and

practicing engineers will find the book both informative and as a useful source of successful case studies

thermal hydrolysis is revolutionizing wastewater treatment current treatment methods have evolved little since pioneering work in the late 19th and early 20th centuries subsequently most wastewater treatment plants are not designed to meet modern drivers such as energy conservation and nutrient recovery additionally sludge management is expensive and often not viewed in high regard by external stakeholders by changing the properties of sewage sludge thermal hydrolysis allows wastewater treatment works to become more efficient enabling the treatment of greater flowrates to higher standards production of renewable energy from sludge is increased whilst quantity of treated material reduced which further decreases processing requirements and costs regardless of what they may be this book aimed at students and practitioners alike describes the development of the technology and highlights the design and economics by means of examples benefits and challenges related to thermal hydrolysis are also characterized alongside selected case studies and ideas for future applications dr william bill barber has had a keen interest in thermal hydrolysis for numerous years and was instrumental in the development of europe s largest facility as well as advising water utilities consultants researchers and government organizations on its potential to modernize wastewater treatment
